

RFID Automation Technologies Perfected for 3PL Warehouse Management

Mar 12, 2018

Orgit Announces RFID Solution for Greatly Improved 3PL Warehouse Management

SOUTH PLAINFIELD, NJ (March 13, 2018) – Orgit introduces a Radio-Frequency Identification (RFID) solution perfected for 3PL warehouse management. Orgit’s RFID technologies are already used globally in warehouses handling food and beverage, automotive, and consumer packaged goods.

Orgit’s in-house team of supply chain experts analyzed the traditional problems associated with introducing RFID automation to 3PL warehouses. Challenges included incompatible hardware and software within existing operations, operational issues across all RFID products from different vendors, and interference from other tracking systems. Warehouse assets often required intensive modifications to physically and digitally accommodate RFID technologies.

Solutions based on Orgit's own 3PL operations:

- RFID readers, scanners, gateways and other equipment entirely developed by Orgit
- Middleware pre-configured and fully integrated with WMS360, Orgit's Warehouse Management System
- Resilient hardware built for complex, high-volume 3PL processes and environments
- Hardware tools that can be effortlessly retrofitted to existing equipment, i.e. forklifts, conveyor belts, and racking systems

Clear Benefits:

Orgit's RFID solution boasts:

- Automated data capture and analysis in real-time
- Complete, accurate visibility and traceability within and beyond the warehouse
- Real-time location and inventory management
- Enhanced strategic planning with advanced business intelligence
- Reduced implementation times with fewer challenges
- 45-55% cost savings compared to related RFID implementation options in the market

By developing an RFID solution for the 3PL process, Orgit rises above the painful delays of managing the needs of different vendors, customers, and solutions providers. Chacko Verghese, SVP, Global Chief Technology Officer, remarks, "As a global leader in technology-driven supply chain solutions, we're proud to introduce an RFID solution that promotes complete visibility, traceability, and significant cost savings for Third Party Logistics providers worldwide."

About

At Orgit, we are problem solvers and efficiency aficionados. Headquartered in New Jersey with offices in Canada, Israel and Vietnam, our 250+ employees enable business and customer success through technology-driven supply chain solutions. Orgit offers comprehensive solutions packages developed by in-house experts and designed for the changing supply chain. Our end-to-end solutions span from manufacturing through last mile delivery, and are comprised of supply chain consulting, customized IT services, product

R&D, warehouse automation, and best-in-class customer support.
